Means Comparison Report

August 2005

Interpreting the Means Comparison Report

Variables
The items from the NSSE survey appear in the left column in the same order and wording as they appear on the instrument. Responses set values are also provided to help you interpret the statistics.

Variable Names
The name of each variable appears in the second column for easy reference to your data file and the summary statistics at the end of this section.

Benchmark
Items that comprise the five "Benchmarks of Effective Educational Practice" are indicated by the following:

LAC=Level of Academic Challenge
ACL=Active and Collaborative Learning
SFI=Student-Faculty Interaction
EEE=Enriching Educational Experiences
SCE=Supportive Campus Environment

Mean
The mean is the arithmetic average of student responses on a particular item. Means are provided for your institution, selected peers or consortium, Carnegie classification, and for the NSSE 2005 national sample.

Class
Means are reported for first-year students (FY) and seniors (SR). If applicable, first-year and senior students that were part of an oversample are included in your institution's data, but not in any of the comparison groups.

Statistical Significance
Items with mean differences that are larger than would be expected by chance alone are noted with one, two, or three asterisks, referring to three significance levels ($p<.05$, $p< .01$, and $p<.001$). The smaller the significance level, the smaller the likelihood that the difference is due to chance. *Please note that statistical significance does not guarantee that the result is substantive or important.* Large sample sizes (like those produced by NSSE) tend to produce more statistically significant results even though the magnitude of mean differences may be inconsequential. It is recommended to start by interpreting only those items with three asterisks ($p<.001$) and to consult effect sizes (see below) in order to make judgments about the practical meaning of the results.

				SR	2.21	2.10			2.10			2.08	*	.17

Effect Size
Effect size indicates the "practical significance" of the mean difference. It is calculated by dividing the mean difference by the standard deviation of the group with which the institution is being compared (consortium, Carnegie type, or NSSE 2005). In practice, an effect size of .2 is often considered small, .5 moderate, and .8 large. A positive sign indicates that your institution's mean was an affirmative result for the institution. A negative sign indicates the institution lags behind the comparison group, suggesting that the student behavior or institutional practice represented by the item may warrant attention. An exception to this interpretation is the "coming to class unprepared" item (item 1f.) where a negative sign is preferred (i.e., meaning fewer students reporting coming to class unprepared).

[a] The 95% confidence interval for the population mean is equal to the sample mean plus/minus the product of 1.96 times the standard error of the sample mean.

[b] Standard deviation is a measure of the average amount the individual scores deviate from the mean of all the scores in the distribution.

[c] This statistic represents the probability that the difference between the mean of your institution and that of the comparison group occurred by chance.

[d] Effect size is calculated by subtracting the comparison group mean from the school mean, and dividing the result by the standard deviation of the comparison group.

[a] The 95% confidence interval for the population mean is equal to the sample mean plus/minus the product of 1.96 times the standard error of the sample mean.

[b] Standard deviation is a measure of the average amount the individual scores deviate from the mean of all the scores in the distribution.

[c] This statistic represents the probability that the difference between the mean of your institution and that of the comparison group occurred by chance.

[d] Effect size is calculated by subtracting the comparison group mean from the school mean, and dividing the result by the standard deviation of the comparison group.

[a] The 95% confidence interval for the population mean is equal to the sample mean plus/minus the product of 1.96 times the standard error of the sample mean.

[b] Standard deviation is a measure of the average amount the individual scores deviate from the mean of all the scores in the distribution.

[c] This statistic represents the probability that the difference between the mean of your institution and that of the comparison group occurred by chance.

[d] Effect size is calculated by subtracting the comparison group mean from the school mean, and dividing the result by the standard deviation of the comparison group.
